Stroke

John and Char

Char has been demonstrating on a friend that had a stroke 2 years ago, resulting in “claw hand” and has been using the Q1000 directly on the stroke area. She has seen a distinct change in the claw hand this morning after 1 treatment yesterday. It was easily opened and remained open when laid on a flat surface. Before it was opened only one finger at a time and would return to the claw as soon as pressure was released. Thanks for the wonderful support and training! John and Char

HC, Omaha, NE

My husband Wayne had a left side stroke 6 years ago. He manages to get around, but the stroke left his left hand tightly clenched and mostly unusable. We purchased a Q10 in November of 2006, and now (April 2007) his hand is almost completely opened. It’s great to see improvement after so long!
